

Structural strengthening in case of earthquakes

Strengthening the roof can prevent it collapsing

Simple water filter

Sand removes bacteria which cause diseases. This filter only works with running water.

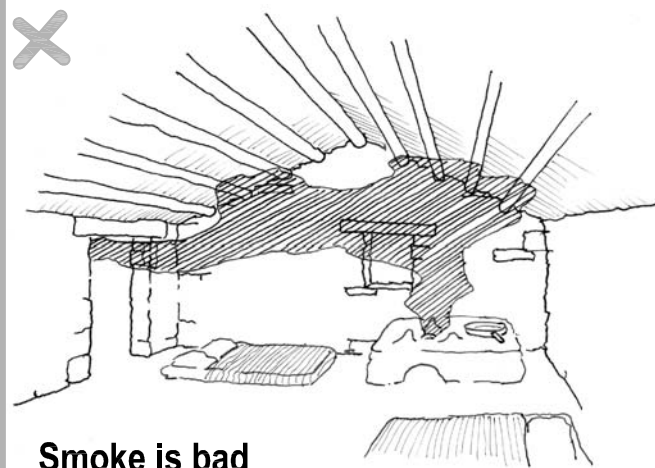

Uncovered water is bad

Flies, mosquitoes and insects like uncovered water. Flies are dirty and carry diseases, mosquitoes can carry Malaria. Cover water when not using it to prevent contamination.

Cutting trees down is bad

It is good to have trees near the house. They provide shade from the sun and protect the ground being washed away by the rain.

Smoke is bad

Lots of smoke inside is bad for eyes and lungs. Use chimney pipes above chula and separate cooking from sleeping with internal partition wall.

Animals inside house is bad

Animals and animal waste are dirty and attract flies which can carry diseases around. Keep animals in separate room or building far away from cooking and sleeping areas.

Puddles are bad

Flies, mosquitoes and insects like wet ground and puddles. Flies are dirty and carry diseases, mosquitoes can carry Malaria. Create drains to soak water into the ground.

Dirty water is bad

Do not use toilet in rivers or streams. This makes them dirty. Drinking dirty water makes people ill and spreads diseases such as Diarrhea, Cholera and Typhoid, etc. Keep the water clean.
